

SAME FUNCTIONALITY, MOBILE FLEXIBILITY

Cortexflo Portable allows exams to be conducted in locations that the standard system cannot be easily moved or transported to, while maintaining all the usability and functionality of the standard system.

Transported in two hard sided cases that have wheels and handles, Cortexflo Portable is easily assembled on site in roughly five minutes.

Photographic exams are conducted via the same steps as the standard system, using the tablet as the touchscreen in conjunction with the camera.

A product of fernico

The camera and tablet can be raised or lowered via the tripods and the pan and tilt handle allows the camera to be easily positioned.

Cortexflo Portable operates on the exact same software as the standard system and therefore allows images to be reviewed, edited, annotated and securely saved once a case is complete.

Cortexflo Portable is well suited to programs that conduct exams off site e.g. prisons, care homes, clinics etc. and/or facilities that do not have a permanent or easily accessible fixed exam room.
