

THE BEST TECHNOLOGY FOR TELEMED FORENSIC AND SEXUAL ASSAULT EXAMS

Cortexflo TELE SAFE (Secure Assisted Forensic Exam) is a fully integrated telemed solution allowing both patients and nurses access to full forensic and SAFE capabilities 24/7.

Whether it be due to location, timing, funding, or availability of trained staff there should never be a situation when a patient cannot get access to the necessary care of a full sexual and forensic exam. Cortexflo TELE SAFE further reduces the wait time for examinations to take place and/or need to transfer a patient to another facility.

Cortexflo TELE SAFE allows Forensic Examiners and SANE experts to guide on site RN's through a full forensic exam including: history taking, evidence collection, injury assessment, STI prophylaxis/testing and discharge planning utilizing a trauma informed approach for victims of sexual assault, IPV, strangulation and patient/suspect forensic evaluations.

Cortexflo TELE SAFE ensures that patients can be examined by a team of trained nurses, ensuring the collection of vital evidence, while providing the best possible trauma care.

Utilizing all the key features of Cortexflo, an integrated video sharing tool allows the onsite RN to screen share with an expert SANE, who is notified of an exam via text/email/phone call. They are prompted to log in via a secure and encrypted portal where they can then view the examination in real time.

Once logged in, the remote SANE can see a live view of the Cortexflo touchscreen and a third-person view of the examination room via a tablet device.

From the tablet the Forensic SANE can introduce themselves, discuss the exam with the patient and guide the onsite nurse with variables such as lighting, patient positioning and patient care.

Via screen share and Bluetooth headset, the SANE can guide and advise the onsite nurse on which images and/or videos to capture. It is crucial that the SANE can see, in real time, high-definition images as they are taken, to provide the clearest instruction and secure the best evidence.

With Cortexflo TELE SAFE, patients and nurses now have access to the necessary support they need to complete effective full forensic and sexual assault exams.

Cortexflo TELE SAFE minimizes or eliminates the boundaries that would otherwise subject a patient to further trauma and a failure of justice by denying them access to a complete forensic and sexual assault examination.
